Imagine not being able to make it out to enjoy your weekly gathering with friends on the dance floor because your joint pain levels make it impossible for you to move to the beat of the caller, or attend a dinner afterwards. Arthritis and Chronic Joint Symptoms afflict approximately 33% of the American population and 58.8% of Americans over the age of 65, leaving a majority with debilitating pain and inhibited mobility. The massive demand for pain relief and freedom of mobility has resulted in a \$12 billion joint health market in the United States; however, the market has often failed to provide a real solution or preventative treatment. CreAgri, Inc. has a product specific to these conditions among their product line. Olivenol(R) Plus Joint Health & Mobility Formula, developed by Dr. Roberto Crea, is a potent antioxidant formula that contains the unique ingredient HIDROX(R) and glucosamine, which has been shown to alleviate the chronic discomfort and pain of arthritis and chronic joint symptoms.

With many pharmaceuticals removed from the market due to negative side effects, CreAgri Inc.'s newest product line is a unique balance of nature and technology. Olivenol(R) Plus Joint Health and Mobility formula is the first and only dietary supplement to contain olive polyphenols (specifically hydroxytyrosol) extracted from the pulp of organically grown olives in combination with glucosamine, a recognized natural building block of cartilage. This formulation may help promote healthy joint function and mobility. The anti-inflammatory characteristics of olive polyphenols have been supported by the American Heart Association Copyright.

Dr. Crea, Founder, President and Chief Scientist of CreAgri, Inc., received his Ph.D. in Biological Chemistry from the University of Pavia, Italy, and is a pioneer in the field of biotechnology. He also served as Associate Professor of DNA Chemical Synthesis at Leiden University in the Netherlands prior to moving to the U.S. in 1977. He is the author of more than 25 international patents, has co-authored numerous scientific articles, and has founded several successful biotechnology companies including Creative Biomolecules, Inc., and Creagen, Inc., both located in Massachusetts.

"Arthritis and Chronic Joint Symptoms affect millions of Americans each year with symptoms that can be agonizing," said Dr. Roberto Crea, "yet staying active is important for optimal health and wellness. This is why we have developed Olivenol(R) Plus Joint Health and Mobility. Compared to other antioxidants derived from organic sources, Olivenol Plus provides the highest level of protection for joint health and mobility. Our Olivenol(R) Plus Joint Health and Mobility formula is the natural solution to stay active -- at any age."

For more information on HIDROX(R), Olivenol(R) Plus, or other CreAgri products that include Olivenol(R) Plus Skin and Beauty Protection and Olivenol(R) Plus Performance & Energy, visit www.CreAgri.com or call 1-866-4CREAGRI, or (510) 732-6478.
